The youngest age recorded is 18 years old. The dataset spans ages from 18 to 64, with an average age of 41.4 years and a median of 42 years.

18-Year-Old Customer Profile

21 customers aged 18 made purchases throughout 2023, generating $11,215 in total sales with an average transaction value of $534—significantly higher than the overall average of $456.

Key characteristics of the youngest customers:

• **Female-dominated**: 13 of 21 transactions (62%) were by females
• **High-value purchases**: 6 transactions exceeded $1,000, including two $2,000 purchases
• **Product preferences**: Beauty (8 transactions) and Clothing (7 transactions) were most popular, followed by Electronics (6 transactions)
• **Strong engagement**: Average of 2.6 units per transaction, slightly above the overall average of 2.5 units

Notable purchases:

• Highest: $2,000 (Beauty, 4 units at $500 each) on November 22, 2023
• Second highest: $2,000 (Clothing, 4 units at $500 each) on November 9, 2023

Despite being the youngest demographic, these 18-year-old customers demonstrate strong purchasing power and willingness to buy premium products, particularly in the Beauty and Clothing categories.

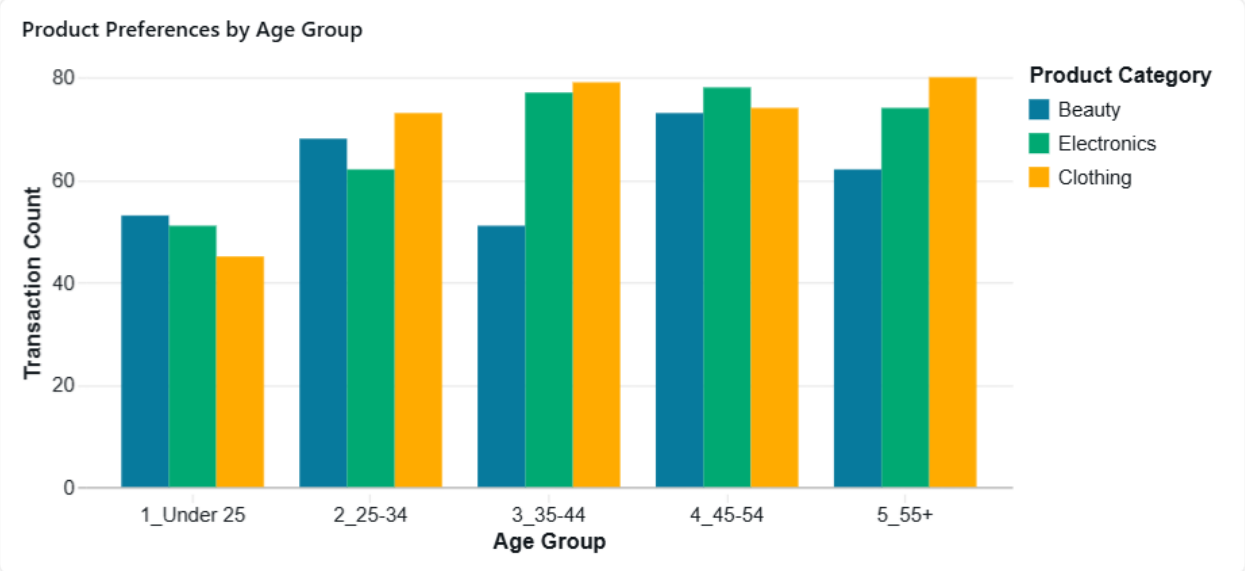

Customer purchasing decisions are influenced by age, timing, and price sensitivity, with younger customers spending more per transaction and weekend shopping commanding premium values. Age shows the strongest correlation with spending behavior, while gender has minimal impact on purchase patterns.

Age as a Primary Driver

Customer Spending Patterns by Age Group

Age Group	Transactions	Avg Transaction Value	Avg Quantity	Avg Price/Unit
Under 25	149	$501.01	2.46	$187.65
25-34	203	$478.28	2.57	$188.28
35-44	207	$467.80	2.57	$173.91
45-54	225	$432.16	2.57	$174.40
55+	216	$417.55	2.38	$178.10

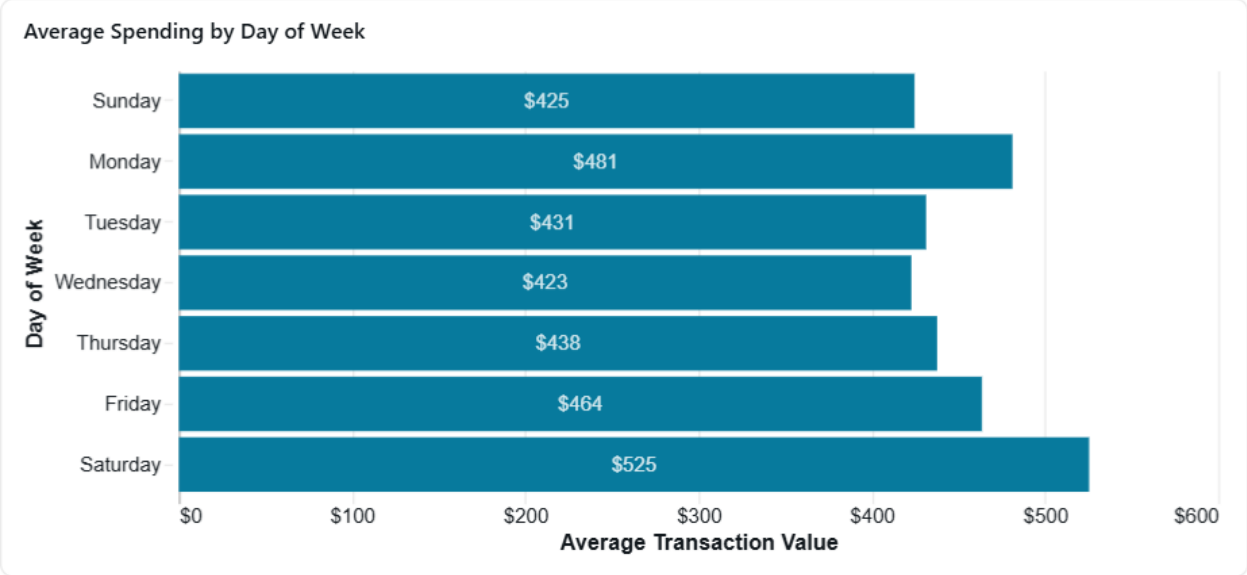

Younger customers spend significantly more per transaction. Customers under 25 average $501 per purchase, while those 55+ spend only $418—a 20% difference. This inverse relationship between age and spending persists across all age groups, with each successive age bracket showing lower average transaction values.

Product preferences shift with age. Younger customers (under 25) favor Beauty products (53 transactions), while middle-aged groups (25-44) prefer Clothing, and older customers (55+) lean toward Clothing and Electronics. The 45-54 age group shows the most balanced distribution across all three categories.

Younger customers are willing to pay premium prices. When purchasing high-priced items ($300-$500), customers under 35 spend an average of $1,053 per transaction versus $997 for those 35+. They also purchase slightly more items per transaction (2.64 vs 2.51 units).

Temporal Patterns

Weekend shopping drives higher spending. Saturday transactions average $525, 24% higher than Sunday's $425. Monday also shows elevated spending at $481, suggesting customers make larger purchases at the start of the week. Mid-week days (Tuesday-Thursday) see the lowest average transaction values around $425-$438.

Seasonal fluctuations are significant. May and October emerge as peak months with 105 and 96 transactions respectively, while September is the weakest with only 65 transactions. Revenue follows a similar pattern, with May generating $53,150 and September only $23,620.

Price Sensitivity and Quantity Behavior

Customers show consistent quantity preferences across price points. Whether purchasing low-priced items ($25-$50) or high-priced items ($300-$500), customers buy approximately 2.5 items per transaction. This suggests quantity decisions are independent of price, with customers maintaining similar basket sizes regardless of item cost.

Higher quantities drive exponentially higher revenue. While 4-item purchases represent only 26% of transactions, they generate 41% of total revenue ($185,860). Single-item purchases account for 25% of transactions but only 10% of revenue.

Gender: Minimal Influence

Gender has virtually no impact on spending behavior. Males and females show nearly identical average transaction values ($455.43 vs $456.55), similar quantities per purchase (2.48 vs 2.55 items), and comparable median spending ($120 vs $150). Product category preferences are also balanced, with both genders distributing purchases fairly evenly across Beauty, Clothing, and Electronics.

Cross-Factor Insights

Younger females show the highest per-transaction spending for Clothing. Females under 35 spend an average of $604 per Clothing transaction, significantly higher than any other demographic-product combination. In contrast, males 35+ spend only $371 per Clothing purchase.

Older males favor Electronics with premium spending. Males 35+ purchasing Electronics average $493 per transaction, the highest among older demographics, suggesting this group values technology products and is willing to pay more for them.

No missing values or incomplete records found in the retail sales dataset. The dataset is complete and clean with all 1,000 records fully populated.

Data Quality Summary

Completeness Check:

• All 9 columns have 100% non-null values across 1,000 records
• No empty strings in text fields (Customer ID, Gender, Product Category)
• No zero or negative values in numeric fields (Quantity, Price per Unit, Total Amount)

Data Integrity:

• All Total Amount calculations are accurate (Quantity × Price per Unit = Total Amount) with zero mismatches

The dataset is ready for analysis without requiring any data cleaning or imputation.

The retail business generated $456,000 in revenue from 1,000 transactions across 2023, with balanced performance across three product categories but facing critical challenges in customer retention, pricing efficiency, and second-half momentum. While the business shows strength in premium product sales, it suffers from zero repeat purchases, operational inefficiency in low-price items, and declining trends in the latter half of the year.

Overall Performance Metrics

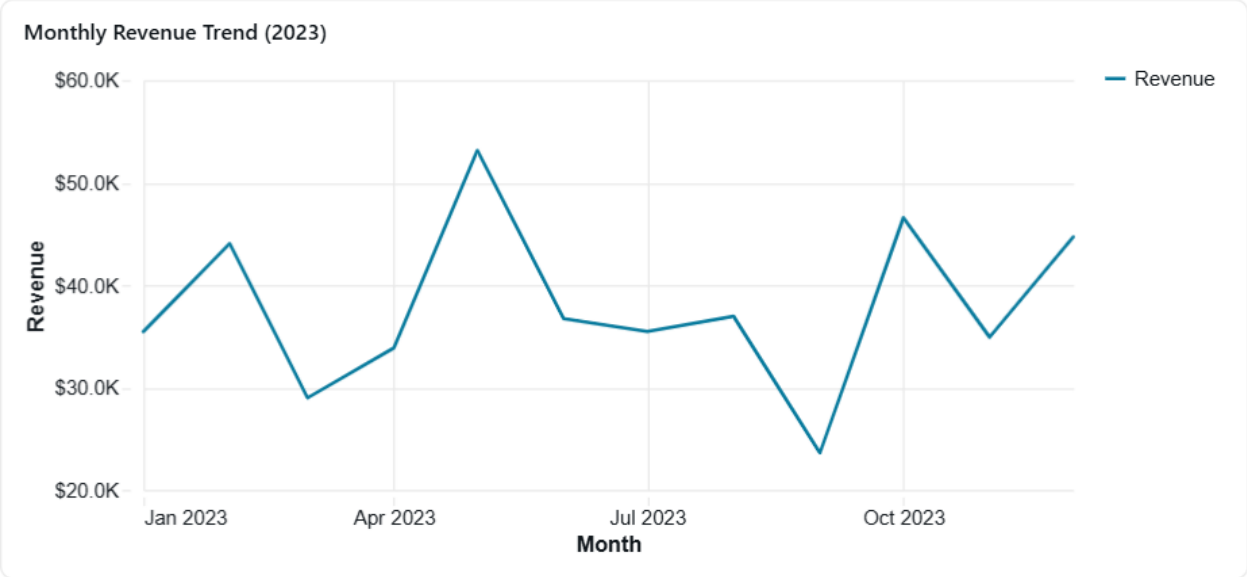

Overall Business Performance Summary

Total Transactions	Unique Customers	Total Revenue	Avg Transaction	Median Transaction
1,000	1,000	$456,000	$456	$

Key Performance Indicators:

- **Total Revenue**: $456,000 over 12 months (Jan 2023 - Jan 2024)
- **Transactions**: 1,000 transactions from 1,000 unique customers
- **Average Transaction Value**: $456 (median: $135, indicating right-skewed distribution)
- **Units Sold**: 2,514 units (2.5 units per transaction average)
- **Customer Retention**: 0% - every customer made exactly one purchase

Revenue Trends: Volatility and Decline

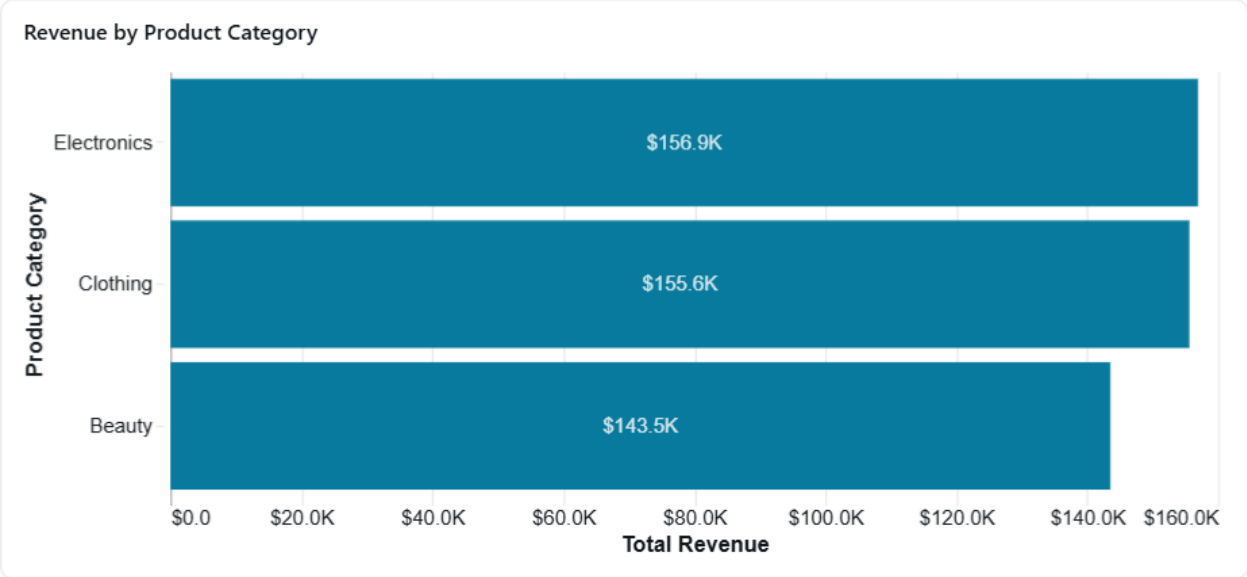

Monthly performance shows significant volatility with May as the peak ($53,150) and September as the trough ($23,620)—a 125% swing. The business experienced a **4.3% revenue decline** from H1 to H2 2023, dropping from $232,235 to $222,235.

Quarterly trends reveal instability:

• Q1 2023: $108,500 (baseline)
• Q2 2023: $123,735 (+14% growth)
• Q3 2023: $96,045 (-22% decline) ⚠
• Q4 2023: $126,190 (+31% recovery)

The Q3 collapse represents a critical weakness, with both revenue and transactions dropping sharply.

Product Category Performance: Balanced but Stagnant

Three categories show remarkably balanced contribution:

- **Electronics**: $156,905 (34.4% of revenue, 342 transactions)
- **Clothing**: $155,580 (34.1% of revenue, 351 transactions)
- **Beauty**: $143,515 (31.5% of revenue, 307 transactions)

While balance suggests diversification, it also indicates **lack of a clear growth driver**. All three categories declined in H2 2023, with Clothing suffering the steepest drop (-15% revenue, -23% transactions).

Customer Demographics: Broad but Shallow

Gender distribution is perfectly balanced (51% female, 49% male) with nearly identical spending patterns ($457 vs $455 average transaction value). Age distribution spans 18-64 years with an average of 41 years.

Age-based spending reveals a concerning inverse relationship:

- **Under 25**: $501 avg transaction (highest spending, smallest segment at 15%)
- **25-34**: $478 avg transaction (20% of transactions)
- **35-44**: $468 avg transaction (21% of transactions)
- **45-54**: $432 avg transaction (23% of transactions)
- **55+**: $418 avg transaction (lowest spending, 22% of transactions)

Younger customers spend 20% more per transaction but represent only 15% of the customer base, suggesting **missed opportunity in youth marketing**.

Critical Weaknesses

1. Zero Customer Retention

Every customer made exactly one purchase—a catastrophic retention rate indicating fundamental issues with product quality, customer experience, or value proposition. This makes customer acquisition costs unsustainable.

2. Pricing Inefficiency

Low-price items ($25-$50) consume 60% of transaction capacity but generate only 12% of revenue ($53,100 vs $402,900 for high-price items). This represents severe operational inefficiency with likely negative margins after fulfillment costs.

3. Revenue Concentration Risk

20% of transactions ($1,000+) generate 63% of revenue ($286,800). While high-value customers are valuable, this concentration creates vulnerability if premium demand softens.

4. Declining Momentum

H2 2023 showed weakening across all metrics: -4.3% revenue, -1.2% transactions, and -3% average transaction value. This trend, if continued, threatens business viability.

Key Strengths

1. Premium Product Success

High-price items ($300-$500) achieve strong conversion with 40% of transactions generating 88% of revenue, averaging $1,017 per transaction.

2. Weekend Performance

Saturday generates the highest revenue ($78,815) with $525 average transaction value—24% above Sunday. This suggests opportunity for weekend-focused promotions.

3. Balanced Portfolio

Three product categories with equal contribution provide diversification and reduce category-specific risk.

Strategic Recommendations

Immediate Priorities:

1. **Implement retention programs**: Loyalty rewards, email marketing, and post-purchase engagement to drive repeat business

2. **Rationalize low-price SKUs**: Discontinue or bundle unprofitable items; implement minimum order values
3. **Investigate Q3 weakness**: Identify root causes of the 22% quarterly decline and implement safeguards

Growth Opportunities:
4. **Target younger demographics**: Increase marketing to under-35 customers who spend 20% more per transaction

1. **Expand premium offerings**: Leverage success in high-price tier with more $300-$500 products
2. **Optimize weekend sales**: Concentrate promotional efforts on Fridays and Saturdays

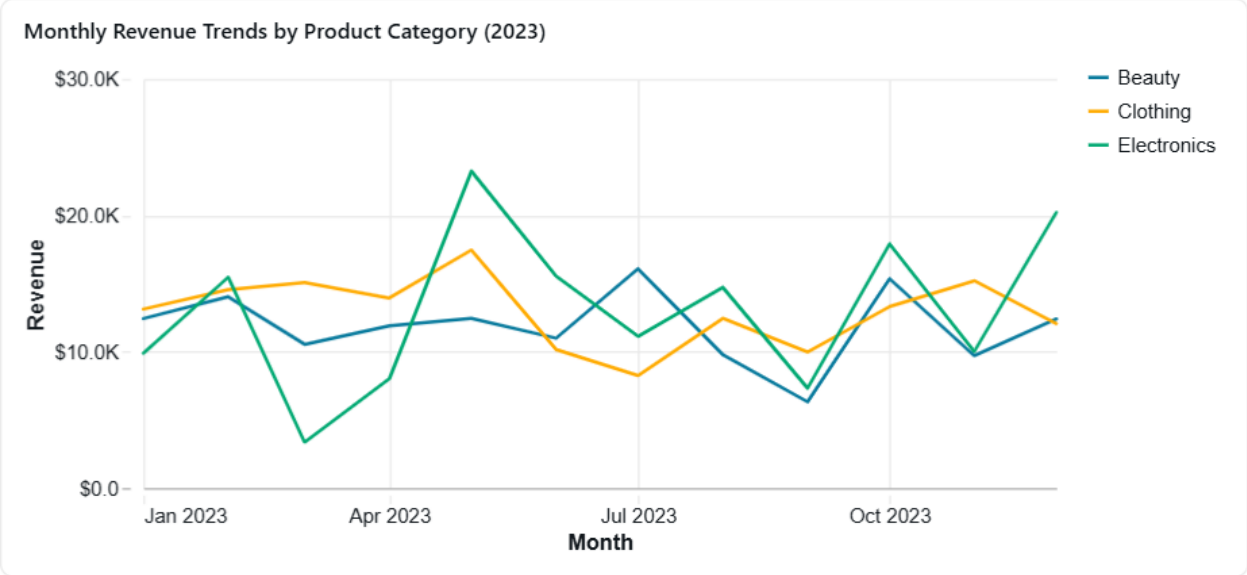

Long-term Strategy:
7. **Introduce mid-tier pricing** ($100-$200) to capture customers deterred by $300+ prices

1. **Address category-specific declines**: Particularly Clothing's -15% H2 performance
2. **Build customer lifetime value**: Focus on retention over acquisition given current 0% repeat rate

The business has a solid foundation with $456K annual revenue and balanced operations, but **customer retention and pricing efficiency are existential threats** that require immediate attention.

The business should prioritize improving Clothing and Electronics due to declining trends and high volatility, while Beauty shows the most stable performance. Clothing experienced a 23% transaction decline and 15% revenue drop in H2 2023, while Electronics shows extreme volatility (44% coefficient of variation) with revenue swings of 588% between best and worst months.

Priority 1: Clothing - Address Declining Performance

Clothing shows the steepest decline with transactions dropping from 198 in H1 to 153 in H2 2023 (-23%), and revenue falling from $84,315 to $71,265 (-15%). The category experienced a severe Q3 2023 slump with -26% revenue growth quarter-over-quarter.

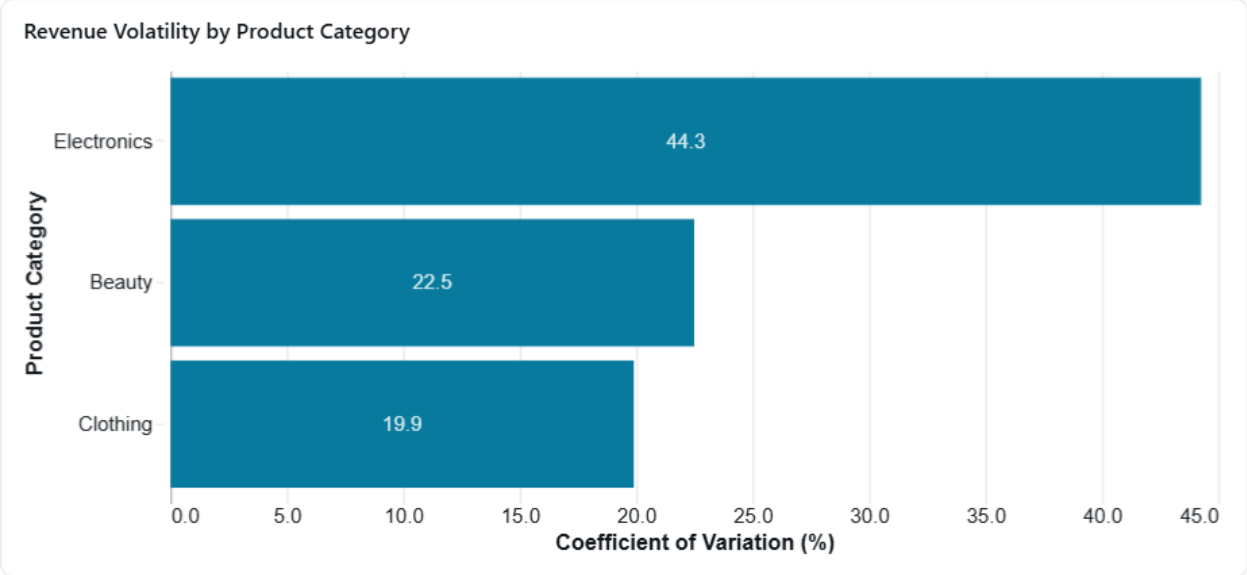

Underperforming segments:

• **Low-price items ($25-$50)** generate only 12% of Clothing revenue despite representing 61% of transactions, indicating poor monetization of high-volume sales
• **Older customers (50+)** spend 32% less per transaction ($396) compared to younger customers under 35 ($541), suggesting the product mix doesn't appeal to higher-spending demographics
• **Males** spend significantly less on Clothing ($420 avg) versus females ($467 avg), indicating a gender gap in product appeal

Recommendations:

• Expand premium Clothing offerings to capture more high-value transactions
• Develop targeted campaigns for male customers and older demographics
• Investigate Q3 seasonal weakness (July worst month at $8,250) and implement promotional strategies

Priority 2: Electronics - Stabilize Extreme Volatility

Electronics exhibits dangerous volatility with a coefficient of variation of 44%, more than double that of Clothing (20%) and Beauty (22%). Monthly revenue swings from a low of $3,380 (March) to a high of $23,245 (May)—a 588% range.

Critical issues:

• **March 2023 collapse**: Only 14 transactions generating $3,380, representing the worst single-month performance across all categories
• **Lowest basket engagement**: Only 48% of Electronics purchases involve 3+ items, compared to 52% for Clothing and 51% for Beauty, suggesting customers are less engaged
• **Younger customers underperform**: Customers under 35 spend only $447 per Electronics transaction versus $500 for those 50+, the opposite pattern of other categories

Recommendations:

• Investigate root causes of March collapse and implement safeguards against similar drops
• Develop bundling strategies to increase basket size and reduce single-item purchases
• Create targeted Electronics campaigns for younger demographics who typically spend more

Priority 3: Beauty - Maintain Stability, Optimize Growth

Beauty demonstrates the most stable performance with the lowest volatility (22% coefficient of variation) and consistent monthly revenue averaging $11,835. However, it has the fewest customers (307) and lowest total revenue ($143,515).

Growth opportunities:

• **Highest revenue per unit** at $186, indicating strong pricing power that could be leveraged
• **Premium segment strength**: High-price Beauty items ($300-$500) represent 39% of transactions and generate 89% of revenue, the best premium conversion rate
• **Older demographic weakness**: Customers 50+ spend only $367 per Beauty transaction versus $475 for younger customers, a 29% gap

Recommendations:

• Expand customer acquisition to close the 44-customer gap with other categories
• Develop age-appropriate Beauty products for the 50+ segment
• Leverage premium positioning to drive higher-value transactions

Cross-Category Insights

First Half vs Second Half 2023 Performance

Category	H1 Transactions	H2 Transactions	Transaction Change %	H1 Revenue	H2
Clothing	198	153	-22.7	$84,315	
Beauty	154	152	-1.3	$72,360	
Electronics	150	191	27.3	$75,560	

Zero repeat purchases across all categories indicates a fundamental customer retention problem. Every customer made exactly one purchase, suggesting the dataset captures new customer acquisition only or reflects poor loyalty.

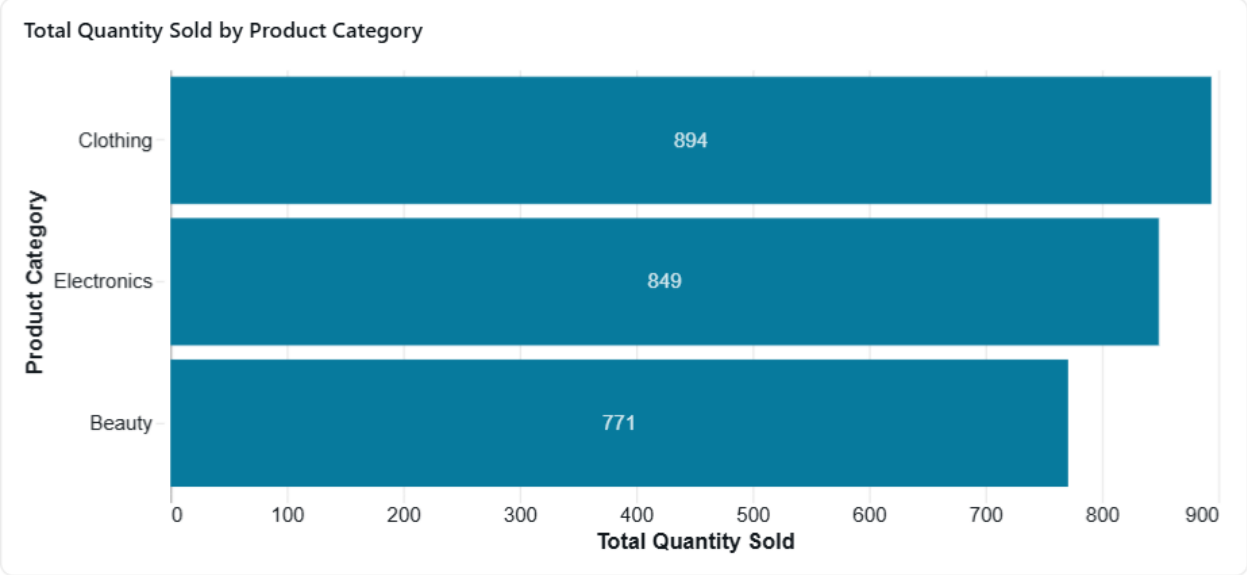

Low-price tier underperformance is universal: across all three categories, items priced $25-$50 represent 60% of transactions but generate only 11-13% of revenue. This suggests the business is over-invested in low-margin products.

Strategic Priorities:

1. **Immediate**: Address Clothing's H2 decline and Electronics' volatility
2. **Short-term**: Implement customer retention programs to drive repeat purchases
3. **Medium-term**: Rebalance product mix toward premium offerings across all categories
4. **Long-term**: Develop demographic-specific strategies to capture underperforming segments

Clothing had the highest quantity sold with 894 units (35.6% of all units), followed closely by Electronics with 849 units (33.8%) and Beauty with 771 units (30.7%). The distribution is relatively balanced across the three product categories.

Quantity Sold by Product Category

At the specific product level (category + price point), **Clothing at $300 per unit** had the highest quantity sold with 193 units across 72 transactions, representing 7.7% of all units sold. This was followed by:

- **Clothing at $50**: 189 units (7.5%)
- **Clothing at $25**: 184 units (7.3%)
- **Electronics at $300**: 183 units (7.3%)
- **Electronics at $25**: 181 units (7.2%)

Top 10 Products by Quantity Sold

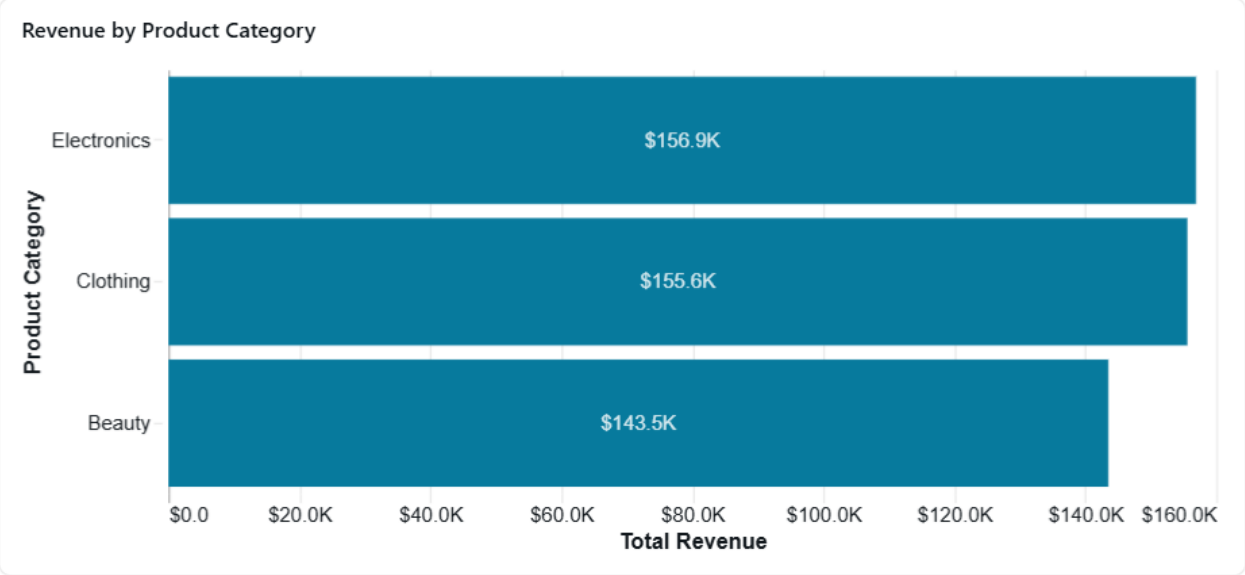

Product Category	Price per Unit	Total Quantity Sold	Transactions	Total Revenue
Clothing	$300	193	72	$57,900
Clothing	$50	189	75	$9,450
Clothing	$25	184	75	$4,600
Electronics	$300	183	72	$54,900
Electronics	$25	181	72	$4,525
Electronics	$50	175	69	$8,750
Clothing	$30	171	65	$5,130
Beauty	$50	170	67	$8,500

Key Insights:

• **Clothing dominates the top 3 positions** by quantity, with its $300, $50, and $25 price points selling the most units
• **Average quantity per transaction** is consistent across categories at 2.5-2.6 units, indicating customers purchase similar basket sizes regardless of product type
• Despite having the highest quantity sold, Clothing generated slightly less revenue ($155,580) than Electronics ($156,905), showing that Electronics commands higher average prices per unit

The dataset contains only **product categories** (not individual products), so I'm providing the top categories by revenue. **Electronics leads with $156,905 in total revenue**, followed closely by Clothing ($155,580) and Beauty ($143,515).

Revenue by Product Category

Product Category Revenue Summary

Product Category	Total Revenue	Transactions	Avg Transaction Value	Units Sold
Electronics	$156,905	342	$458.79	849
Clothing	$155,580	351	$443.25	894
Beauty	$143,515	307	$467.48	771

Key Insights:

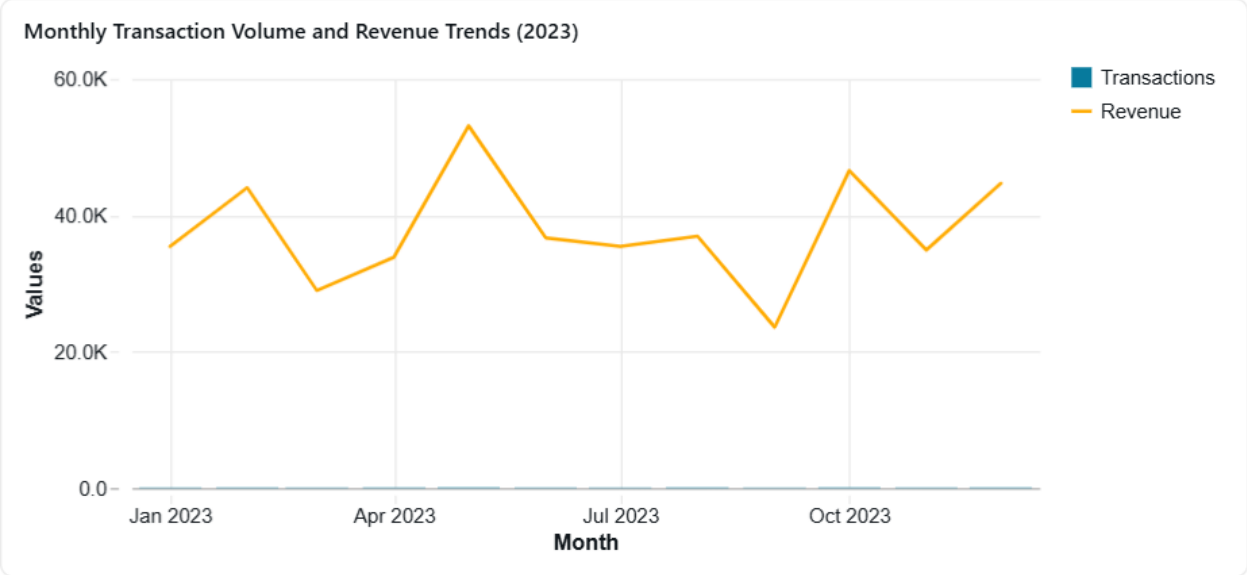

• **Electronics** generates the highest revenue at $156,905 (34.4% of total) with 342 transactions and an average transaction value of $459
• **Clothing** is a close second at $155,580 (34.1% of total) with the most transactions (351) but a slightly lower average value of $443

• **Beauty** contributes $143,515 (31.5% of total) with 307 transactions and the highest average transaction value at $467

The three categories are remarkably balanced in revenue contribution, with only an 8.5% difference between the highest (Electronics) and lowest (Beauty). Beauty products command the highest average transaction value despite having the fewest transactions.

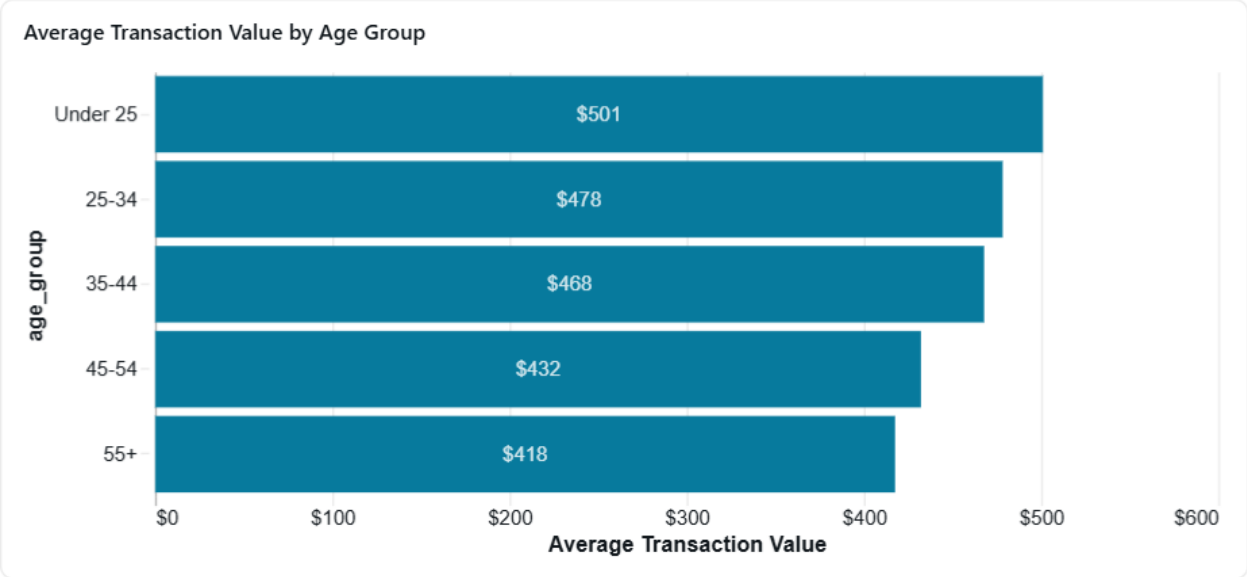

Customer purchase trends reveal seasonal fluctuations, demographic spending patterns, and a concentration of revenue in high-value transactions. The data shows May and October as peak months, younger customers spending more per transaction, and balanced gender participation with nearly equal transaction volumes.

Temporal Trends

Seasonal patterns show significant monthly variation in 2023. May had the highest transaction volume (105 transactions, $53,150 revenue), while September was the lowest (65 transactions, $23,620 revenue). The data covers January 2023 through early January 2024, with 2024 containing only 2 transactions (incomplete period).

Demographic Patterns

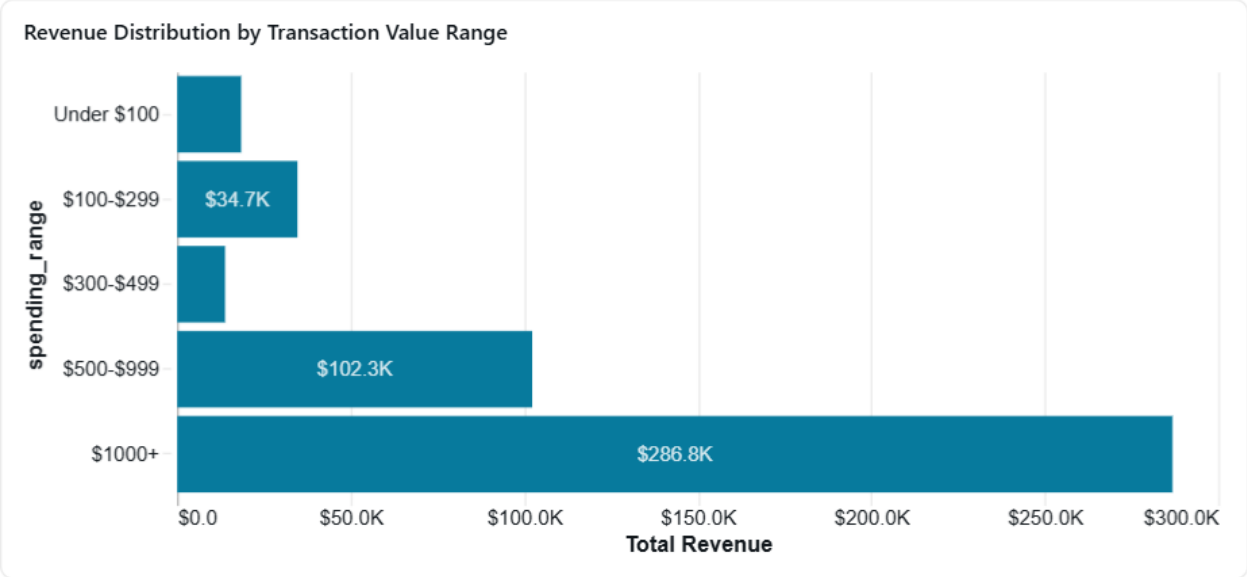

Age-based spending shows younger customers have higher average transaction values. Customers under 25 spend an average of $501 per transaction, while those 55+ spend $418 per transaction—a 20% difference. The 45-54 age group has the most transactions (225), but the under-25 group spends the most per purchase.

Gender distribution is nearly balanced: females made 510 transactions ($232,840 total) versus males with 490 transactions ($223,160 total). Average transaction values are virtually identical at $456.55 for females and $455.43 for males.

Product Category Preferences

Gender preferences by category show males slightly favor Electronics (172 transactions) and Clothing (177 transactions), while females prefer Beauty products (166 transactions) and Clothing (174 transactions). However, males spend more per Beauty transaction ($487 vs $451).

Purchase Behavior

Transaction value concentration: High-value transactions ($1,000+) represent only 20% of transactions but generate 63% of total revenue ($286,800). In contrast, transactions under $100 make up 35% of volume but only 4% of revenue.

Quantity patterns show customers typically purchase 1-4 items per transaction, with 4-item purchases generating the highest average transaction value ($707) and total revenue ($185,860).

Customer Loyalty

All 1,000 customers made exactly one purchase during the period, indicating this dataset captures unique customer transactions rather than repeat purchase behavior. Each customer ID appears once with an average spend of $456.

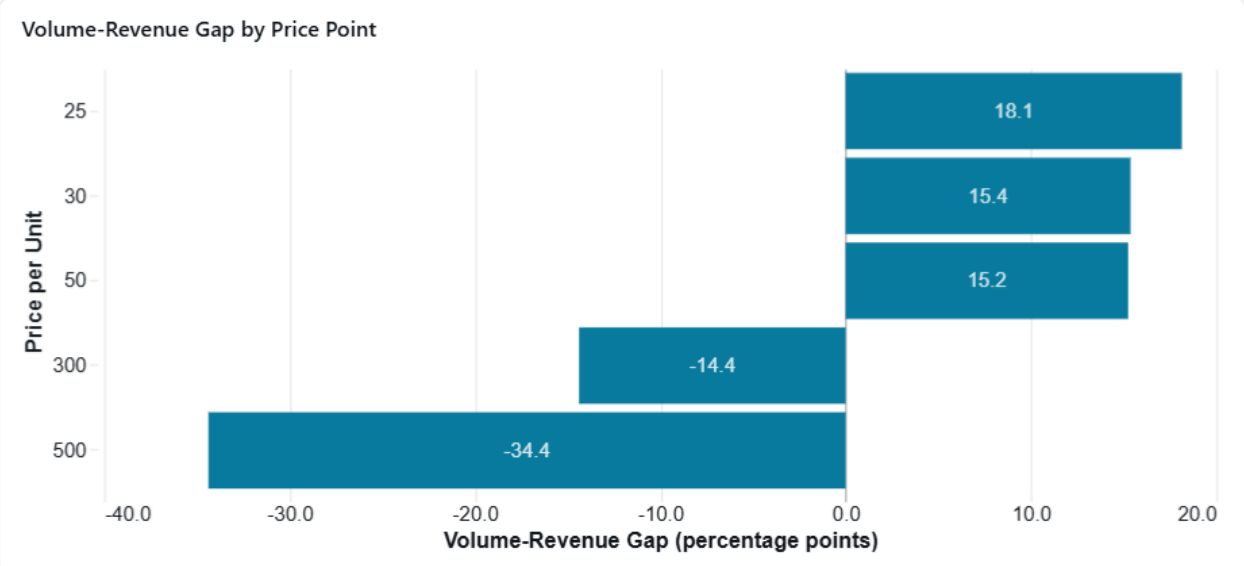

Low-priced products ($25-$50) generate 60% of transaction volume but only 12% of revenue, indicating severe operational inefficiency and potential margin erosion. These high-volume, low-revenue items consume disproportionate resources while contributing minimally to the bottom line—a classic profitability trap.

The Volume-Revenue Disconnect

High-Volume, Low-Revenue Product Summary

Price Tier	Transactions	Units Sold	Total Revenue	% of Transactions	%
Low Price ($25-$50)	604	1,501	$53,100	60.4%	
High Price ($300-$500)	396	1,013	$402,900	39.6%	

The $25 price point is the worst offender, accounting for 21% of all transactions but generating only 2.9% of revenue—a gap of 18 percentage points. Similarly, $30 items represent 18% of transactions but just 3% of revenue, and $50 items capture 21% of volume but only 6% of revenue.

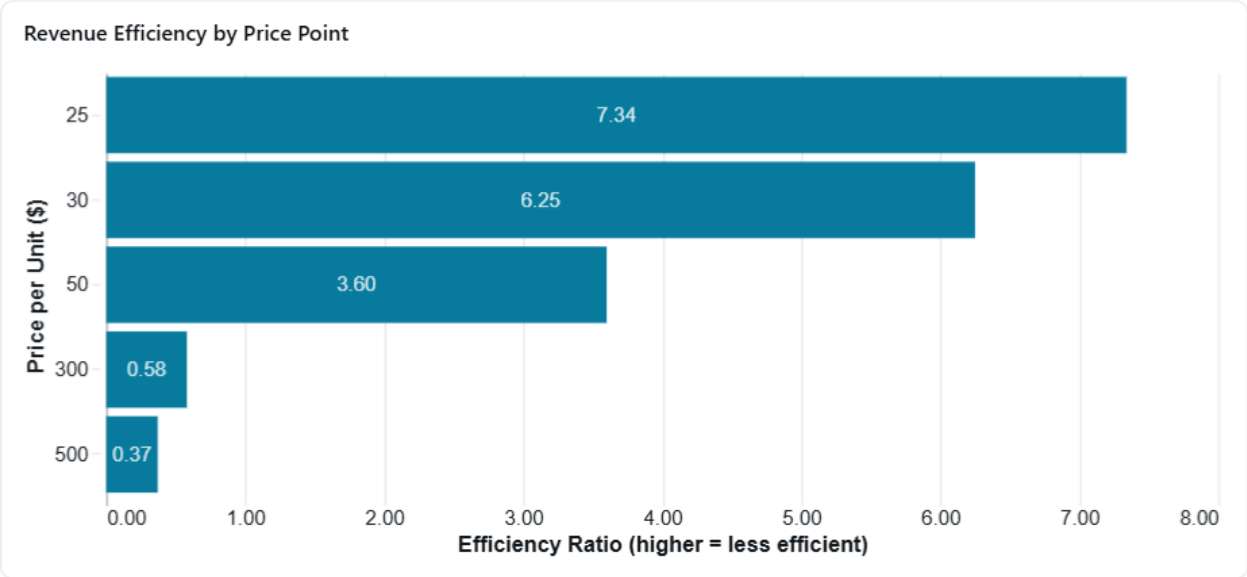

This pattern is consistent across all three product categories:

• **Clothing**: Low-price items = 61% of transactions, 12% of revenue
• **Electronics**: Low-price items = 59% of transactions, 11% of revenue
• **Beauty**: Low-price items = 61% of transactions, 11% of revenue

What This Indicates

1. Margin Erosion and Profitability Risk

Low-price items generate only $35.38 revenue per unit sold versus $397.73 for high-price items—an 11x difference. With similar units per transaction (2.49 vs 2.56), the revenue per transaction gap is even starker: $88 versus $1,017.

The **efficiency ratio** reveals the severity: $25 items have a ratio of 7.34 (meaning they consume 7x more transaction capacity relative to revenue generated) compared to 0.37 for $500 items. This suggests:

• **Fixed costs per transaction** (payment processing, fulfillment, customer service) are likely eating into or eliminating margins on low-price items
• **Opportunity cost** is significant—each low-value transaction occupies capacity that could serve a high-value customer
• **Break-even risk**: If margins are thin, these products may be unprofitable after accounting for operational overhead

2. Customer Acquisition vs. Retention Strategy Misalignment

Demographics show no meaningful difference between low-price and high-price purchasers:

• **Age**: Low-price buyers average 41.8 years vs 40.7 for high-price (statistically insignificant)
• **Gender**: Perfectly balanced at 50/50 split for both tiers

• **Purchase behavior**: Similar basket sizes (2.49 vs 2.56 units per transaction)

This indicates **low-price items are NOT serving as entry-level products** to attract a different demographic. Instead, they're cannibalizing potential high-value sales from the same customer base. With zero repeat purchases in the dataset, these items aren't building loyalty either.

3. Pricing Strategy Failure

The pricing gap is too extreme: Products are priced at either $25-$50 or $300-$500, with no mid-tier options. This binary structure forces customers into low-value transactions when they might accept moderate pricing.

Specific problem areas by category:

• **Clothing $25 items**: 35% of category transactions, only 24% of category revenue—the worst gap at 18.4 percentage points
• **Electronics $25 items**: 35% of transactions, 26% of revenue—17.2 point gap
• **Beauty $50 items**: 36% of transactions, 52% of revenue—still underperforming at 15.9 point gap

4. Operational Burden Without Strategic Value

Low-price items consume 60% of operational capacity (transactions, inventory management, fulfillment) while generating only 12% of revenue. This creates:

• **Inventory carrying costs** disproportionate to returns
• **Fulfillment inefficiency**: Same picking, packing, and shipping effort for 1/11th the revenue
• **Customer service load**: Support costs are similar per transaction regardless of value
• **Payment processing fees**: Often a fixed percentage, eating deeper into thin margins

Timing analysis shows no strategic advantage: Low-price purchases are evenly distributed across weekdays (13-17% per day), with no concentration during off-peak periods that might justify using them to smooth demand.

Strategic Implications

This pattern indicates:

1. **Loss leader strategy without conversion**: If low-price items are intended to drive traffic, they're failing—no repeat purchases and same demographics as high-price buyers
2. **Competitive pressure**: May be matching competitor pricing on commodity items while lacking differentiation
3. **Incomplete cost analysis**: Pricing likely doesn't account for true fully-loaded costs per transaction

4. **Portfolio imbalance**: Over-investment in low-margin SKUs that don't serve a clear strategic purpose

Recommendations

Immediate actions:

1. **Conduct margin analysis**: Calculate true profitability including all allocated costs for each price tier
2. **Rationalize low-price SKUs**: Discontinue or bundle items with negative contribution margins
3. **Implement minimum order values**: Require $100+ for free shipping or add handling fees for low-value orders
4. **Introduce mid-tier pricing** ($100-$200 range) to capture customers willing to spend more than $50 but deterred by $300+ items

Strategic shifts:
5. **Reposition low-price items as add-ons**: Bundle with high-value purchases rather than stand-alone offerings

1. **Test price increases**: The 60% volume concentration suggests inelastic demand—customers may accept 20-30% increases
2. **Focus marketing on high-value products**: Shift promotional spend from driving volume to driving value per transaction

May 23, 2023 recorded the highest sales with $8,455 in total revenue from 9 transactions, averaging $939 per transaction.

Top Sales Days

Top 10 Dates by Total Sales

Date	Transactions	Total Sales	Units Sold	Avg Transaction Value
2023-05-23	9	$8,455	29	$939.44
2023-05-16	11	$7,260	26	$660.00
2023-06-24	5	$6,220	19	$1,244.00
2023-02-17	6	$5,890	21	$981.67
2023-08-05	8	$5,205	17	$650.63
2023-07-14	10	$5,125	26	$512.50
2023-02-01	3	$4,700	11	$1,566.67
2023-07-24	5	$4,610	13	$922.00

The top 5 highest sales days were:

1. **May 23, 2023**: $8,455 (9 transactions)
2. **May 16, 2023**: $7,260 (11 transactions)
3. **June 24, 2023**: $6,220 (5 transactions)
4. **February 17, 2023**: $5,890 (6 transactions)
5. **August 5, 2023**: $5,205 (8 transactions)

What Drove the Highest Sales Day

Transactions on May 23, 2023 (Highest Sales Day)

Date	Product	Gender	Age	Qty	Price/Unit	Total
2023-05-23	Beauty	Female	29	4	$500	$
2023-05-23	Electronics	Female	20	4	$500	$
2023-05-23	Electronics	Male	44	4	$300	$
2023-05-23	Clothing	Male	29	4	$300	$
2023-05-23	Electronics	Female	60	3	$300	
2023-05-23	Electronics	Female	47	3	$300	
2023-05-23	Beauty	Female	52	3	$50	
2023-05-23	Beauty	Female	18	3	$25	

May 23, 2023's success was driven by high-value, high-quantity purchases:

• **Two $2,000 transactions** (Beauty and Electronics at $500/unit, 4 units each) contributed 47% of the day's revenue
• **Four premium purchases** ($900-$1,200 each) in Electronics and Clothing added another $4,200
• **Strong basket sizes**: Average of 3.2 units per transaction, well above the overall average of 2.5 units
• **Premium product mix**: 78% of transactions were high-priced items ($300-$500), compared to the typical 40%

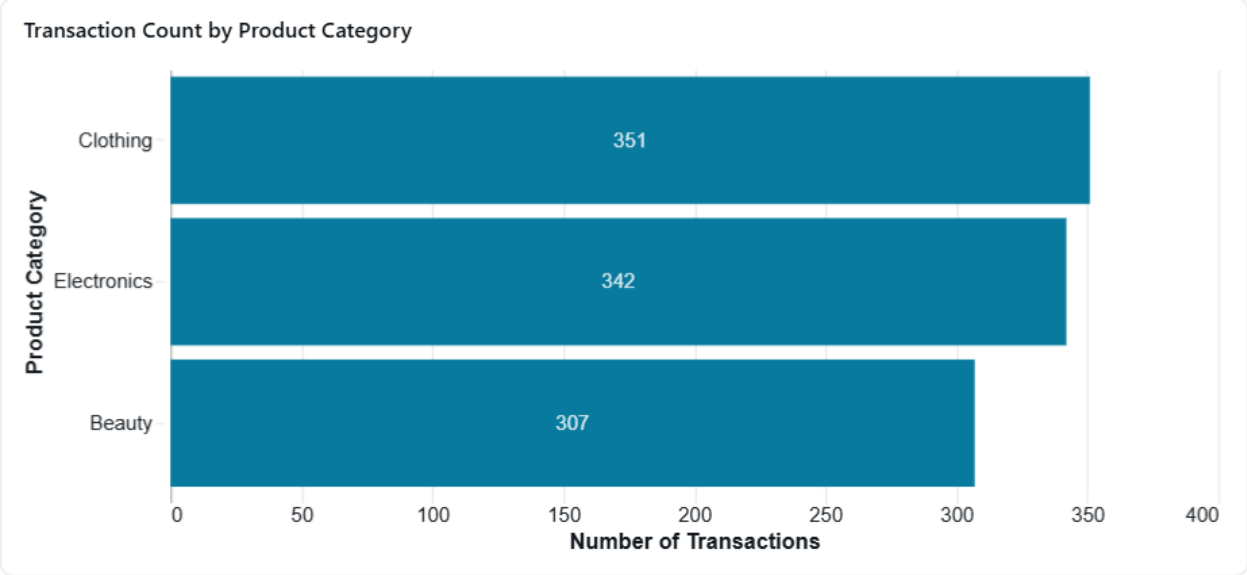

Key characteristics:

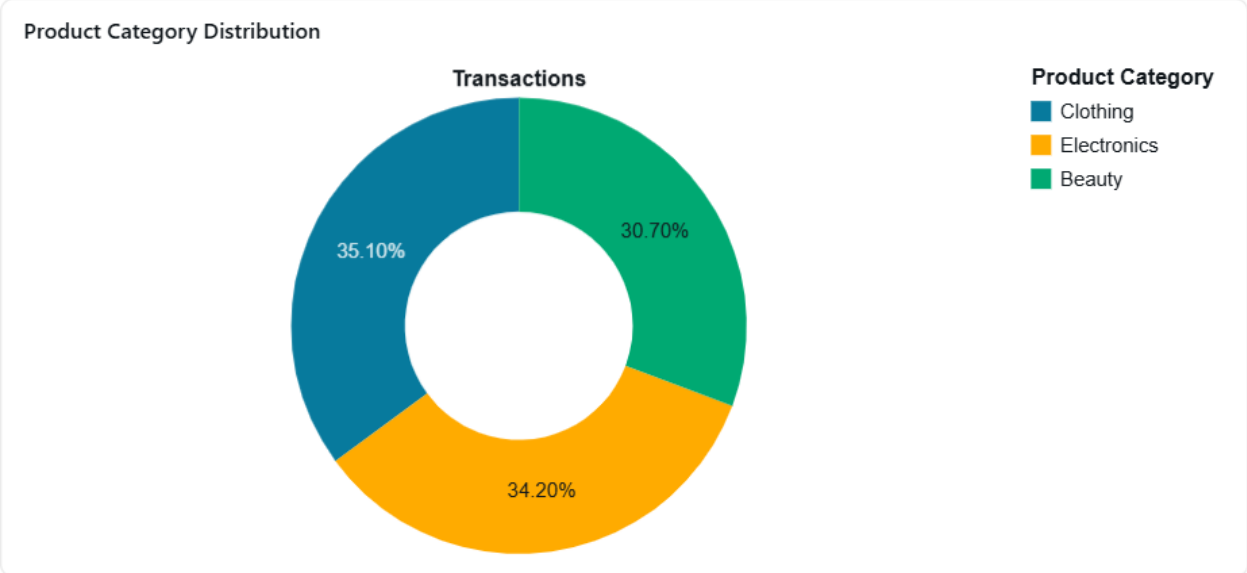

• **Female customers dominated** (7 of 9 transactions)
• **Electronics led** with 5 transactions generating $5,030 (59% of daily sales)
• **High engagement**: Customers purchased 4 units in 4 of the 9 transactions, indicating strong buying intent

Notably, May 16th had more transactions (11) but lower total sales ($7,260), showing that **transaction value matters more than volume** for peak sales days.

Clothing has the highest number of transactions with 351 purchases, followed closely by Electronics (342) and Beauty (307). The distribution is fairly balanced across all three product categories.

Transaction Breakdown

Key Insights:

- **Clothing** leads with 351 transactions (35.1% of total)
- **Electronics** follows with 342 transactions (34.2% of total)
- **Beauty** has 307 transactions (30.7% of total)

The three product categories show relatively even distribution, with only a 44-transaction difference between the highest (Clothing) and lowest (Beauty) categories.
